Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-13, drawn to the driving method for operating a solid-state image sensing apparatus, classified in class 348, subclass 294.
- II. Claim 14-24, drawn to the construction of a solid-state image sensing apparatus, classified in class 348, subclass 294.

The inventions are distinct, each from the other because:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because The combination does not require that the image sensing apparatus have a reset means, a load means, and a second reset means. The subcombination has separate utility such as the solid state image sensing apparatus can be driven by a different method than the method of Invention 1.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
